# **EXAMINATION SYNOPSIS**

**FOR SEMESTER EXAMINATION IN ACADEMIC YEAR 2020/2021**

**IN**

**,,SOCIAL MEDICINE“**

**WITH STUDENTS AT MU - PLEVEN**

**SPECIALTY: MEDICINE**

**,,MEDICINE“**

	<b>FORM</b> <b>EXAMINATION SYNOPSIS</b>	Index: FO - 04.01.01 - 02 Issue: P - 02 Date: 10.01.2012 Page 2 of 7 pages
--	--	---

## **I. FUNDAMENTAL PART OF PUBLIC HEALTH – SCOPE AND METHODS OF PUBLIC HEALTH**

1. Social medicine as a science. Subject matter. The disciplines of sociology, demography, epidemiology, statistics and their relation to social medicine. Descriptive and prescriptive parts of social medicine. Methods of social medicine.
2. The concept of health and disease. Dimensions of health. Positive health. Social determinants of health and disease. Socio-medical approach for studying social determinants of health on individual level.
3. Sociological approaches in social medicine - sources and methods of collecting sociological data. Questionnaire design - questions and questionnaire formats. Self-administered questionnaire.
4. Interview: types, methods of conducting, interview process. Sociological observation: types, advantages and disadvantages, observer roles.
5. Epidemiology - definition and scope of epidemiology. Achievements in epidemiology. Uses of epidemiology. Basic concepts - risk, risk factors, population at risk, rate, ratio, proportion.
6. Measuring health and disease. Measuring disease frequency - prevalence, incidence rate, cumulative incidence. Relationships between different measures.
7. Comparing disease occurrence. Absolute comparison - risk difference, attributable fraction, population attributable risk. Relative comparison - relative risk, odds ratio.
8. Types of epidemiological studies - classification. Descriptive studies. Analytical studies (ecological and cross-sectional studies).
9. Cohort studies - types, design, conducting, advantages and disadvantages of cohort studies. Potential errors in cohort studies.
10. Case-control studies - types, design, conducting, advantages and disadvantages. Potential errors in case-control studies.
11. Experimental (interventional) epidemiological studies. Randomized controlled studies. Field trials. Community trials.
12. Causation in epidemiology. The concept of cause. Establishing the cause of disease.

	<b>FORM</b> <b>EXAMINATION SYNOPSIS</b>	Index: FO - 04.01.01 - 02 Issue: P - 02 Date: 10.01.2012 Page 3 of 7 pages
--	--	---

13. Demographic approach to health assessment. Population size and population composition by sex and residence. Population age structure - types, dependency ratios, medical and social consequences of population aging.
14. Fertility-related indicators: definitions of different indicators, assessment scales, worldwide trends.
15. Population reproduction rates - Total fertility rate, Gross reproduction rate, Net reproduction rate - definitions, worldwide trends, problems.
16. Mortality-related indicators: definitions of different indicators, assessment scales, worldwide trends, problems. Leading causes of deaths in developed and developing countries. Standardization – standard populations, standardized death rates.
17. Infant mortality-related indicators - definitions of different indicators, scale, worldwide trends, leading causes of infant mortality in developed and developing countries. Under 5 mortality rate.
18. Life expectancy - definition, life tables, worldwide trends.
19. Morbidity-related indicators: measures of morbidity - incidence, point and period prevalence, iceberg of morbidity. Factors, influencing incidence and prevalence.
20. Morbidity - sources and methods of studying morbidity. International classification of diseases.

## **II. THE PRACTICE OF PUBLIC HEALTH**

21. Communicable diseases - worldwide trends, leading causes of infectious morbidity. Global burden of infectious diseases. Principles of infectious disease control.
22. Major non-communicable diseases - significance for the population health, worldwide trends of CVD, cancer, COPD, accidents and diabetes. The burden of non-communicable diseases - DALYs.
23. Major determinants of non-communicable diseases - life style risk factors, environmental risks, biological and genetic factors, health care services factors. Dahlgren and Whitehead's social model of health.
24. Health care system as a social system – definitions of main terms (health system, health care, medical care), objectives, evolution, reforms. WHO approach to health systems assessment.
25. The concept of health care. Main characteristics of health care. Levels of health care.

	<b>FORM</b> <b>EXAMINATION SYNOPSIS</b>	Index: FO - 04.01.01 - 02 Issue: P - 02 Date: 10.01.2012 Page 4 of 7 pages
--	--	---

26. Typology of health systems in developed countries. State monopoly system. Health insurance system. Health system of liberal pluralism. Reforms in health systems in UK and USA.
27. Health policy. Priorities of health policy in developed countries.
28. International health collaboration. World Health Organization. Other UN agencies. Millennium goals.
29. Development, main goal and basic targets of WHO global strategy “Health for all in the 21 century”.
30. Primary health care – definition, elements. WHO strategy for primary health care. Declaration of Alma-Ata.
31. Hospital care – mission, structure and goals. Assessment of utilization of hospital beds. Quality of hospital care.
32. Public health needs of specific population groups: mothers. Maternal mortality, family planning. Health services for mothers - antenatal, intranatal, postnatal care. Risk approach. Delivering health care to mothers.
33. Public health needs of specific population groups: children and adolescents. Health problems of children and adolescents. Health services, community health and policies.
34. Public health needs of specific population groups: people with disabilities. Assessment. Measures of health and disability. Public health services and interventions.
35. Public health needs of specific population groups: older people. Health problems and health needs of older people. Health promotion and prevention. Public health implications of ageing.
36. Public health needs of specific population groups: family health. Processes within families and health effects. Macro-level processes: demographic, technological, economic and political factors. Future challenges.
37. Needs assessment. Health inequalities. Impact of sex and gender on specific health problems. Gender and the delivery of health care. Socio-economic inequalities. Reducing health inequalities.
38. Prevention - scope and levels of prevention. Primordial prevention. Primary prevention - population and high risk strategy.
39. Secondary prevention - screening. Criteria for screening. Sensitivity, specificity and predictive values of screening test. Screening programmes.
40. Health promotion - definition, development of the concept and practice of health promotion, basic principles.

**SEMESTRIAL EXAM**

I. Exam consists of two parts:

1. Test of 30 questions on the whole synopsis
2. Theoretical questions: One question from the fundamental part and one question from the practice of public health

II. Assessment criteria:

1. Test assessment criteria:

Number of right answers	Mark
18	3.00
19	3.25
20	3.50
21	3.75
22	4.00
23	4.25
24	4.50
25	4.75
26	5.00
27	5.25
28	5.50
29	5.75
30	6.00

2. Final examination mark is calculated as follows:

$$\text{Final mark} = (0,40 \times A^*) + (0,40 \times B^*) + (0,10 \times C^*) + (0,10 \times D^*)$$

A - mark on the examination test

B - mark on the theoretical questions

	<b>FORM</b>	Index: FO - 04.01.01 - 02
		Issue: P - 02
	<b>EXAMINATION SYNOPSIS</b>	Date: 10.01.2012
		Page 7 of 7 pages

C - average mark for the first semester of social medicine course  
D -average mark for the second semester of social medicine course

A, B, C, and D should be different from Poor (2.00), i.e. A, B, C, and D should be at least Average (3.00) to proceed to calculation of final mark.

**February, 2020**

**Prepared by Prof. Dr Silviya Aleksandrova-Yankulovska,MD,PhD,DSc,MAS, tel. 884 196**
